MASTERING THE MANAGEMENT OF ONLINE TRAINING

SIMPLIFY HOW YOU MANAGE TRAINING ACROSS YOUR ORGANIZATION

Genius Enterprise centralizes registration and management for all tools you use to deliver training. By seamlessly integrating with multiple LMS vendors and learning delivery platforms, Genius Enterprise aggregates all your training data under one user-friendly interface. You can easily manage who needs training and track how well they were trained using your training delivery method of choice. Genius Enterprise provides a wealth of out-of-the-box reports from this aggregated training data to help you monitor compliance, deliver certifications, and track individual development plans - all in a centralized, intuitive platform that can be customized to meet the unique needs of each client.

FEATURES

MANAGEMENT DASHBOARD

Genius Enterprise provides a management dashboard that filters out the noise from the broader organization so managers can quickly visualize the training for their direct reports. Key performance indicators help managers monitor training activity, completion results, and engagement rates.

LEARNER DASHBOARD

Learners have an intuitive training dashboard where they can quickly access and track all their training no matter what LMS or training delivery platform the organization deploys. Learners can see training they are actively enrolled in now, what training they have completed, and what training is left to complete in their assigned learning paths.

REGISTRATION AND ECOMMERCE

Genius Enterprise provides a catalog of all training being offered by your organization. Learners can easily browse any type of training opportunity available to them, and register for it. If there is a cost for enrollment, Genius Enterprise integrates with many popular Payment Gateways, such as PayPal®, Authorize.net®, and WorldPay®.

APPROVAL WORKFLOWS & PREREQUISITES

Registration can go through an approval workflow where a manager approves the training request before the learner is given access. Genius Enterprise can cap enrollments in any training event, and manage the waitlist. Genius Enterprise can also manage enrollments based on successful completion of pre-requisites.

HIERARCHY

Genius Enterprise provides a nested affiliation hierarchy for complete control of information. These affiliations provide a filtered view where managers can only view, manage, and report on learners within the designated affiliation.

INTEGRATION CAPABILITIES

Genius Enterprise offers native integration to all major LMSs and can also be integrated with other platforms such as Canvas®, D2L®, Blackboard® and Moodle®. Enrollments are created automatically, and grades and completion flags are retrieved automatically for timely reporting on all training.

DYNAMIC REPORTING & DASHBOARDS

Users can easily create custom reports using any data tracked in Genius Enterprise, and build their own personalized dashboard. Reports can either be added to their dashboard or scheduled for delivered by email on a periodic basis. Genius Enterprise makes it easy to analyze training data at a micro or macro level.

POWERFUL COMMUNICATION TOOLS

Genius Enterprise provides actionable information based on user-defined criteria, including performance and activity levels. For example, a user could send an email to all learners who have not logged in during the last 7 days and have performance scores below 70%. Emails can be setup to be sent automatically based on dynamic criterion, and all emails are logged in a communication log.

CERTIFICATES & TRANSCRIPTS

Upon successful completion of training, Genius Enterprise captures the final performance score and issues a certificate for that training. The completed training will also be written to the learner's transcript, a training record of all training that has been successful completed throughout their career. Events such as enrollment and completion trigger a customizable, HTML-based email to be sent to the learner.

LEARNING PATHS/CERTIFICATIONS

Learning paths provide a great mechanism to group courses together in a variety of bundles. These can be assigned to foster programs like certifications, Individual Development Plans or even discounted package deals. Detailed reporting and dashboard tools allow learner to monitor progress and for training admins to report on overall program completions.

PRESCRIPTIVE RULES

Genius Enterprise provides administrative automation tools to reduce the burden in managing complex learning and compliance programs. Prescriptive rules easily enhance Training Manager tasks by defining business rules to automate enrollments into course or learning paths to ensure all learners are correctly given the skills required.

SCORM CLOUD

Integration with a SCORM Cloud account. Customers can easily upload their SCORM packages when managing their training courses in Genius Enterprise. Once that is done, learners can self-register and pay for training, gaining immediate access to e-learning content. Performance scores, completions, and activity flow back into Genius Enterprise to be used in dashboards and reports across e-learning delivery silos. The SCORM results data can also be feed into a third-party Learning Record Store.
